

# The ISRI Ti:

The multi-talent for construction machinery

For demanding work:  
Maximum comfort and functionality -  
combined in one seat.

The ISRI Ti - The smart multi-talent

# Universally applicable – The individual workplace

---

Inspired by the element titanium, the ISRI Ti is the ideal workplace in the robust working environment of working machines thanks to its stability. The platform concept offers durable and high-quality solutions for different everyday work requirements. With its modular design, the ISRI Ti provides a tailored solution for every challenge.

reddot winner 2024

Highest comfort through maximum individuality.

## The right configuration for every application

---

The ISRI Ti impresses with its individuality. Different backrest lengths and bolster widths allow the seat to be installed in various cabins. It therefore offers an optimally adapted workplace - individuality for every requirement.

**ISRI Ti** awarded the AGR seal of approval for back-friendly products.

## Comfort

The perfect basis for your requirements

- ✔ Adjustment of the seat cushion tilt and depth
- ✔ Seat occupancy detection

## Premium

More features, more possibilities

- ✔ All comfort functions
- ✔ Active climate control system (ACS)
- ✔ Side bolster adjustment
- ✔ Lateral suspension
- ✔ Horizontal isolator
- ✔ MSR - Minimum swing stroke regulation

\* The Human Machine Interface could be the display in the cabin of the vehicle, for example. The equipment models listed are examples.

The memory function for multi-users.

## All individual – available at the touch of a button

The ISRI Ti<sup>e</sup> learns quickly. The **memory function** of the seat not only memorizes the seat height, length adjustment and backrest, but also the height and depth of the lumbar support - a first on the market. The all-rounder features seat heating, seat climate control, lumbar and side bolster support and a massage function, among other things, which take driving comfort to a new level.

The ISRI CAN-Bus system

## Quick adjustment via the HMI interface\*

The CAN-Bus-Technology of the ISRI Ti<sup>ec</sup> allows every driver intuitive control directly via the vehicle display. When entering the cab, the seat can be automatically adjusted to the individually saved position thanks to personalised driver profiles. The ISRI Ti<sup>ec</sup> also enables effortless integration of new functions — a seat technology that adapts precisely to the driver.
